

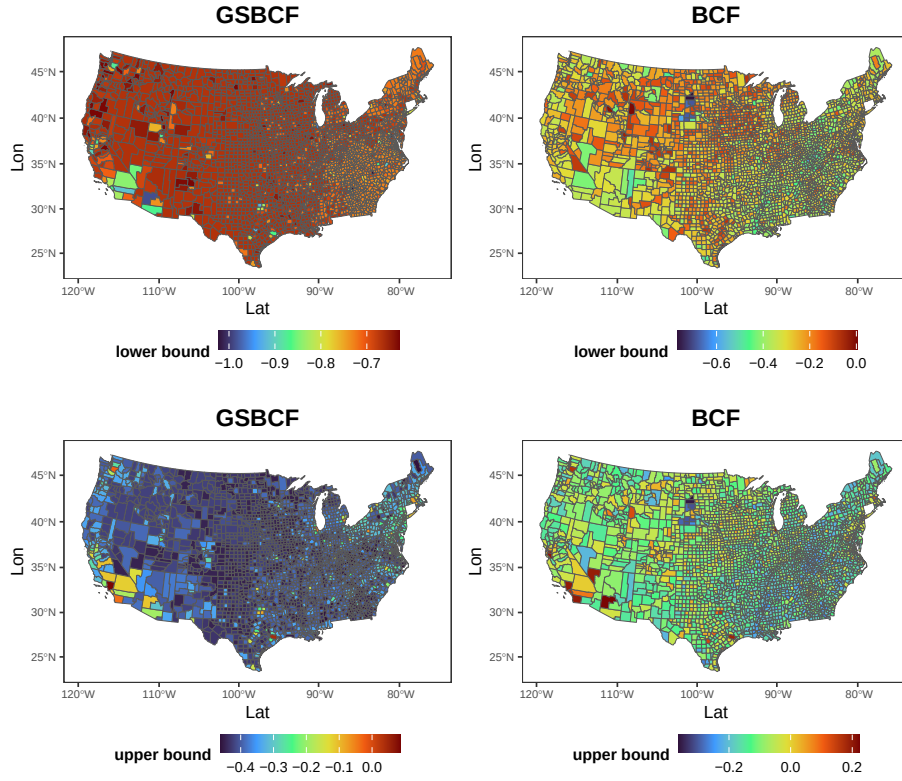

Figure 1: Lower and upper bound estimates for USCPD.

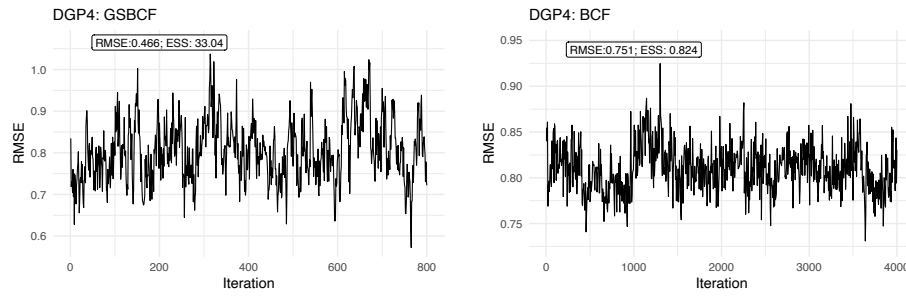

Figure 2: DGP4: Traceplots, MSPE, and ESS per 100 iterations of GSBCE and BCF for two randomly selected simulated replicates.

Table 1: Sensitivity analysis results on DGP4. All results are based on 50 replicates and 225 iterations per replicate. RMSPE and CRPS are reported with standard deviations in parentheses. Time denotes the total runtime (in seconds).
